# Feature at a Glance

## Introducing: Improved categorization of search results

### Customer challenge

When performing a search in guided buying, landing pages, catalog items and forms are returned on one tab altogether and spot items are only accessible by clicking on the 'Spot Buy' tab.

### Meet that challenge with **SAP Ariba**

With this feature all search results are returned on one page and are broken out by catalog items, spot buy items, suppliers, and forms.

### Experience key benefits

Users now have an easier time understanding what was returned from a guided buying search and no longer have to know to click on the Spot Buy tab to view Spot Buy items.

### Solution area

Guided Buying

### Enablement information

On by default for customers already enabled to use Guided Buying.  
No action required.

|                        |   |        |
|------------------------|---|--------|
| Value measure          |    | low    |
| Ease of implementation |   | simple |
| Regional limitations   |  | global |
